Salvo Loading Bay Safety Case Study: Top US Retailer

Top US Retailer sees success with Salvo across almost 50 distribution centres nationwide

The Sentric Safety Group recently had the opportunity to partner with a top US retailer, ultimately providing them with safety solutions on a large scale, to secure multiple loading bay doors across almost all the retailer's distribution centres nationwide. With a longstanding history, and highly respected by customers across the United States, Sentric was eager to show this top retailer what can be achieved with Salvo to ensure first-class on-site safety for personnel using the Salvo Automatic System for Manual Doors (SAMD Kit).

Challenge: This retailer is certainly one of the United States' largest and most successful corporations. This means that with up to 50 distribution centres across the country, and numerous loading bays, this retailer is responsible for the safety of thousands of personnel. In recent years, this retailer had suffered a few near misses, and was concerned about the safety of staff on the ground. Not only was reputation on the line, but mishaps like these meant they were losing time, making for less efficient workdays and a loss of money.

Solution: The Sentric Safety Group knew they could offer this large retail corporation a Salvo safety solution which would mitigate human error and provide complete safety for personnel in their distribution centres – saving the retailer both time and money. The solution to their challenge was the SAMD Kit. The SAMD Kit uses an automatic door locking device (SADL) to safeguard manual doors from being opened under unsafe conditions.

Results: When the project was complete, the Sentric Safety Group had successfully fitted approximately 7,500 doors with SAMD Kits, across almost 50 distribution centres nationwide. Since installation, the risk of human error has been mitigated as far as possible and there have been no near misses – an absolute win for our retailer. The distribution centres are therefore much safer, and peace of mind for both facilities directors and personnel has been restored. One senior leader also noted that a much safer environment has additionally resulted in a more efficient workday now that time is no longer lost to near-misses or accidents on site.

The Salvo Loading Bay Safety System ensures safety for personnel across 50 distribution centres for top US retailer

According to one of the Facilities Directors of this top US retailer, the decision to go with Salvo made sense because of three reasons: the simplicity and ease of the solution installation, the high level of safety it offered, and the overall cost.

What began as a trip to the retailer's headquarters by one of the Sentric Safety Group's senior directors to discuss a possible partnership, fortunately turned into a longstanding working relationship, and ultimately resulted in the installation of approximately 7,500 distribution centre doors across almost 50 distribution centres.

This meeting was also an opportunity to demo the SAMD Kit, showcasing how the system uses an automatic door locking device (SADL) to protect manual doors from being opened under unsafe conditions. This was just what the retailer needed to avoid near misses at the loading bay,

and senior leaders saw firsthand how beneficial the system could be. This is when things really took off.

In early 2018, six Salvo systems were trialed at one of the retailer's distribution centres, with one of our product brands Kirk supporting on the installation, providing key codes and tracking numbers. The trial operation was seamless, and the retailer was very pleased with what they deemed to be the best system for ensuring safety for on-site personnel. It was then a simple call that informed us that the retailer wanted to move forward to implement a company-wide roll out of the SAMD system across all distribution centres nationwide.

The retailer now has SAMD Kits installed on almost all its distribution centre doors, and Salvo has accommodated the retailer with spare parts for each centre. Pleased with the solution, and together with

Salvo, this top retailer has successfully created safe and secure distribution centres, ensuring personnel make it home safely at the end of every day.
